

706 Sound Studio Setup

1. Turn on the MOTU box and the Volume Control box. Let the system start up. (This will help when the computer locate the “16A” Output as it is starting up.)

2. Turn on the computer.

3. After computer is completely on, turn on the right and left speaker. (You can turn on the center, and both rear speakers if working in 5.1 surround. Also the Sub will already be on.)

4. Now you should be all set up to use any program you desire in the 706 Sound Studio.

BE SURE TO LOOK OUT FOR THE AUDIO OUTPUT TUTORIALS

These will be helpful for troubleshooting if your program is not allowing you to playback out of the speaker system.
